Cadwell sierra summit user manual

Remove the probes from the end of the stimulator; This is done pulling them out. By pattern, the line of the first place of stimulation is highlighted as soon as the nerve is selected. A "Culos" - selects the legs. Store the EMG orientation buffer by pressing the F2 key (store live buffer) at the Sierra Wave base unit. 920 Tabdata Window Tabdata General View The tabdata window provides a general view of all tests completed in the patient, as well as summary tables for test protocols such as NCV, F/H and EMG. 1084 Axillary nerve diagram 472 Performing Motor Unit Dwell à Nica 478 Protocols Click on the first blank field and make a selection on the pop-up list. The noisy of leaving is adjustable to the usual from -10 to 95 dB nhl. 123 Sierra Wave Help Manual Open a test protocol to display the acquisition screen (this would be necessary to reset or collect additional tract). 960 MUSCULAR PLANT CHANGE 621 Botan controls and fKey (reflex h) the standard configuration is 0.97. The EMG driven window has a scanning delay of 1 divisive. Select a test protocol, NCV, for example. 25 Sierra Wave Help Manual 26 Introduction - The Basic is selected, all tests included in the study will be in the study window and the first test protocol listed in the study, it will be automatically initialized and be ready for data acquisition. If the test protocol resulting from the exchange still exists in the study window, it will be created automatically. Never nerve or test to advance to the next nerve: Use the buttons No. 1 (item / study site) to highlight another f/h nerve in the study window. MUNE INCURT - Tracking window showing max cmap, increments and differences 885 Sierra wave aid manual for traction shown above. 492 storing a live buffer To turn off the mmua, perform one of the following. For example, if the Mother APB had 2+ fibs, it would be the phrase: e à Aferences "Poll Right Abd Brev showed a moderately increased spontaneous activity. Selection can be made for NCV tables and left/right comparison tables. 155 Test Menu Configuration Window - General View Click on the OK botan. In this example, the configuration is 1.0 divisions; Therefore, the second incremental tracking will be displayed 1.0 divisions below the first tracking. Sliding bars can be used to increase (squeeze) or decrease (release) the amount of error acceptable between the model and the candidate. 398 Live vs. 637 No answer selected, it is displayed in the study window and © added the muscle injection table. 899 Sierra Wave Help Manual Select the Mune-MPS test: If a study already already Selected, simply click on a Mune-MPS muscle name (ie right delight) within the study window or rotate the E 1 (study item) to highlight the muscle name. 478 Protocols Click on the SMUA Botan in the PC Function Key menu. Classify by nerve name - classifies the sentences in alphabom order by the nerve name. Each line in this table represents a segment. The active (black) and refinement (red) entrances are displayed for each channel, as well as for the CREFF entry (only the 4 channel amplifier). It also removes the selection mark next to the muscle name, this indicates that the motto is not more punctuated. Use complete description - uses the name and meanings of the category of the complete description table to describe normal mothers. Run a great (optional) day press the F7 key (Grand AVG). Click on the setting of the phrase shown in the lower right corner. 941 List of Sierra Wave Manual Markers - Discovery Senthouses will be formatted on a marker list. Check the amplifier configurations Check the gain, hicut, locut and scanning speed configurations and make sure they are appropriate for the test that is being performed. The sign unit of the sierra wave base can also be used to provide a stamulum. 245 EMG stimulated configuration of fiber: 100-240 VAC - 2AMP fusive located at the bottom of the base. View Emg Eng Live Emg is displayed in the trace window and a compacted Buffer Emg Live view is displayed below that. Press the F3 (soft) key of the function during the acquisition to remove the high frequency of the active (whites). Change the side and repeat steps 4 - 8. Tracking window The tracking window displays the purchased electromyogreal and evoked answers patient. To return to EMG live, do one of the following. After reaching an appropriate initial intensity, apply the stimulator to the patient's supra-orbital nerve and The stamulum by pressing the stim button in the senior of the stimulator. 881 MUNE INCREMENTAL BORNs envelope - When tone, pip202 or PIP212 are selected, a stamulum envelope can be selected here. Usually, two easily discriminable tones à Ç ught of different pitches are presented in random order. 619 distance and speed List of Mother - Open the window of the muscle list of Mune -INCR, which allows you to select and add moms to your study window. 1033 FILE IN WINDOWS XP To delete a nerve or group of the list of the list: Click with the right mouse buttons on the nerve or in the group. . 1152 F / H Wave in Wave Index This step can be repeated to acquire additional incremental tracts of this stamulum location, but usually only 2 or 3 are easily obtained. Sel Cursor / Move Cursor - This botan is standard for moving cursor mode and can be used to move the imnio or peak cursor in active tracking (white). 10 Introduction and Configuration of Custom Keyboard Keyboard Keyboard Keys Keys (F1, F2, F3, F4) - The operations attributed to these functions change, depending on the protocol of active test. Select the stimulation side, make sure the right or left side is selected. The noisy of intensity (in milliamps) is displayed on the screen on a small pop-up window and also in the stimulating section. If the side you are changing in the study window, this nerve will be added automatically. When more than one incremental response is For a stamulum site, the program automatically calculates the tracking of the difference between the most recent and previous response and places the resulting difference in the aligned innio window. Saving changes in the Mune-MPS configurations during an exam, you can make changes in Vanios Parahs or Window Layouts. 9 Sierra Wave Help Manual Back Connections Amplifier - Connect the 2 or 4 channel amplifier. 195 SIERA WAVE HELP MANUAL 3. The accounting of the report can be selected in the suspended list or by clicking on the navigation botan. To avoid excessive hearing stimulation, make sure the intensity of the stamulum never exceeds 75 dB above the hearing threshold. Max Cmap 6. The need for the firing rate is better with the increase in the number of samples. 57) Chapter 14 - Estimation of the number of engine unit: New tons and new uses Mark B. 368 attributing data famulus to a study Change the sides that change the side of the side to a motto is different from changing the sides. 64 blink - basic operation General configurations of stimulator: this section has configurations that affect the intensity of the stimulator ELÁ © trico. Select the VEP test protocol from the study/test menu. Select a nerve from the displayed list. Mother © All #1 Simple Value Limit: Click the Normal Value Field and type the desired value and press ENTER. 567 f wave (markers) 91 Sierra Wave Help Intensity L-R: Click here to define the intensity value of the initial stamulum. F RASTER / OVER CONTROL KEYS - Press this function key to switch between display modes EMG captured in the raster or overlap modes (this is overlapping). 906 MPS Setup Setup 721 Reanaling a race the cursors will be placed in the selected test and values (Latan, amplitude etc.) derived from the cursors will be displayed in the window of the EP cursor table. The name of the reporting

selected, you can click on mouse right in an abnormal value and select defined as normal in the pop-up menu. Or click the red X in the upper right corner of the screen. 1087 Femoral and Femoral Nerve Diagram a confirmation message will be displayed - click OK to delete the run. 1087 - Choose rarefaction, condensation or alternating polarity. Impedance window. The side configuration is not the Sierra's Wave 917 Wave aid Manual apply SEP, AEP, VEP, P300, RR or flashing test protocols. 66 Introduction - The Basics Auto Seq. Allows manual or automatic sequencing through the RNS table. Turn off the Sierra wave base unit, monitor (only for the work area configuration) and printer. 676 Knob & Fkey (blink) controls click on the right mouse of mouse in the increase of increments. Make sure it is an alternate (optional) after the acquisition of an appropriate increase in increments, press the F7 key (Alt Alt) to automatically detect possible alternate instinctions in the data set. Direct paths when the wave program is first installed, it creates a data folder and a configuration folder. Cursor mode is inserted by pressing the F5 key on the PC keyboard. 1208 Hip CLICK WITH THE RIGHT RIGHT MOUSE IN THE VALUE OF THE SPEED, L AMP (UV or MV) - This column shows the corresponding amplitude values (such as peak use or peak to the rail) to the left side. 34 starting - the menu of From the basic measurement table window / cursor in EMG test protocols, NCV and RNS the measurement table window / cursor supports the use of the context menu. Optional optional Show Live Monitor - When this window is activated, it displays the "Live" activity from the record electrodes. The results of the mmua mmua prints can be included in reports by any of the mother described below. LIST OF MOTHERS - Opens the window of the muscle list MUNE -MPS, which allows you to select and add moms to study window. Desktop (console) 1. Stopped EMG Live: Review the Buffer Live - Move for Trown and forward in the EMG Buffer Live turning the 1 (Review / Stop Reproduction Review), press the botan to reproduce the buffer. A confirmation message will be displayed. Click a cursor using the left mouse and dragged button along the traction for your new location. File Direct - defines the standard place to file patient data and store reports. Formation Options: These configurations determine how the sentences are formatted in the report. Now change CNT tracking to 20 and leave the number of initial tracking in the nerve map editor window. They are such for intraoperative applications, ecocg tests and Bneep tests in babies. Click on the Relationship Options to display the following window: Flashing abnormal in the reports - when this box is verified abnormal values to be indicated in reports, usually as red boxes or bold. Click another RNS Mother in the study window using the mouse. Press this SWITCHES key to SMUPS mode, which automatically stores the mother CMAP and configures the program to record potential engine unit. 353 Saving Test Settings Turn on the equipment in the following order: sierra wave base unit monitor (only for the configuration of the area, you will need to activate The Cart Energy Switch then the computer. Phases - the number of base line crosses plus one, between the and the final cursors. Adjust the intensity of the stamulum using the wheel in the stimulator ELÁ © trico or in the buttan No. 3 (intensity / pulse width). 965 opening a test In the pop-up menu, select copy all boxes. Programary Botaders á e ught 1 and 2: These two screenings are programmed á € 20 Å lys by test protocol. For guidance on the stimulation, the municipal needle is connected to the (-) stimulator with the refinement electrode-connected electrode (+). The patient's information may be edited at any time after the inacer of an exam. 708 SFEMG Plot Descriptions the gain and scanning speed of the live monitor window is the same as the main tracking window. TURNS - The number of times the potential has changed direction in at least 50 UV, measured between the start and the final cursors. The meaning changed to "moderately". The full rea-this column displays the full response of the response in MV-MS or UV-MS, depending on the configuration of the amplitude units. The configurations of the F wave test protocol will be displayed on the right side of the screen. The test tracks and the cursor table will be displayed on the right side of the window. The study/test menu will be displayed, use the mouse or the F 1 to select the individual test study or protocol. Phrases Generator - Allows the automatic generation of discoveries of the tabdata window for EMG, NCV, F wave, Hreflex and EP test protocols. 1226 configuration of the tibial sep The phrase is returned to your pattern state and the color of the background changes back to the color of no edit mode. This will do that active locks are currently stored, the counting of the day will be redefined to zero and the stimulation will continue automatically in a new set of traction. 593 Botan controls and rKey (F wave cursors) mmua is still activated. 56 Starting - the scoring table of the basic mother, depending on their preferences in the configuration of the system, abnormal values can be signaled with a red background color, as bold text, as bold text with an asterisk or as bold text and red background color. STALBERG, S. In the pop-up menu select Start the new execution. The report will be sent to your standard printer. 880 Protocols saving changes in RR configurations during an examination, you can make changes in Vanios Parahs or Window Layouts. Gain / Sweep - This standard botan in gain mode and can be used to increase or decrease gain (UV / DIV) of the tracking window. 423 Deleting a instant, buffer or capture 876 Normative Data H reflex orange with reflex loat H. 967 overall view of the anatomyview window 689 EMG of fiber ánica Duration (MS) - A duration of MUP screening, in milliseconds between the unicio and the final cursors. Fill in the report - the program will go to this view if you select a model of report that entry of the user. Click Ok save these information in a file in the configuration folder of the user. By clicking on the right mouse buttan in a muscle name EMG in the study window: the following context menu is displayed. Press the Store key to save the increase and difference. 204 Configuration of the Intensity Test Protocol - defines the initial intensity of the initial stamulus for the first nerve to be selected. If the equation is activated, the normal value on the site or in the segment table will be replaced by the letters. Clicking the RNS window polarity field controls or controls the toolbar can also reverse the stimulator polarity. The output results are displayed on the right side of the tabdata window. This view allows you to choose any model in the system. 7 Sierra Wave 10 Help Manual. Repeat until 20 to 30 MUPS are obtained for the Mother under investigation. To configure the equation for the uthancy in the wrist. The hallmark of alternation manual to manually mark a SMUP tracking as an alternation: 1. When a NCV table, f wave or h-reflex is highlighted in the tabdata window, the Senthouses of discoveries for these test protocols will be displayed at the bottom of the window. Change of the configuration of the NCV column configuration of the NCV column when an NCV summary table or individual nervous test protocol is selected, the buttons change columns are disposable. During EMG data acquisition, you can easily adjust the gain and scanning speed using the 4 (gain / scan) button in the base unit of the saw wave. 125 Sierra Wave Help Manual Edit Mode with Changes. Example F wave tracking window. 928 Tabdata Window Site Table The Measurement Options. Press the botan to switch to scanning mode and rotate to adjust the speed of (MS/DIV) from the tracking window. In this example, the configuration is 0.5 divisions; Therefore, the second SMUP tracking will be displayed 0.5 divisions below the first tracking. 49 Operation Báica F/H F/H 36 Introduction - The basic in all test protocols the F5 F5 Key is attributed to the cursors, and the F6 Function Key is attributed to E E F The. 191 SIERA WAVE HELP MANUAL Mother © All #2 - Simple value limit per track Etária: AT © B Ethalial groups can be defined and normal values can be inserted for each group. Mune-MPS Table for traction shown above. 446 cloud plot descriptions Press this button to switch to move the cursor mode that will allow you to move the selected cursor (green triá íding). Show column hair shading - When this box is checked, the column tracks at the top of each table are shaded gray. 133 Direct Paths Alternation results in a larger number of perceived increments, which, in the 861 Sierra Wave curve manual results in a lower value of SMUP MOTHER and therefore a larger or overestimated mune value. Pulse Width - Normally defined as 100 or 200 microseconds. 915 Sierra Wave Help Manual Study Window. Change the configurations for the initial side of the test displacement and channel displacement and click OK. 1255 Dangerous Operation Conditions The lower the configuration of the lands of rejection the more sensitive the program reject large artifacts. 772 Table Options Tappicic Configurations Gain (UV/DIV) Hicut (Hz) Locut (Hz) Scanning Speed (MS/DIV) 2K engine nerves 5k 10k 10 5.0 Sensory nerves 10 to 20 2k 10 2.0 2. 970 - Muscle data Alternation of increasing answers increasing negative negative amplitude and then subtracts each incremental response of all subsequent; Any identical solutions are considered examples of alternation. A curve is any change in the direction of the signal that exceeds 50 UV between the UMA (O) and End (E) cursors. 87 SIERA WAVE HELP Manual AEP - Operation Báica Select the AEP Test: If a study has already been selected, just click on the AEP test protocol in the study window or rotate the buttan No. 1 (item / study site) to highlight the test. An optional sentence generator is available to create phrases that describe the results. 110 Introduction - Basic frequency - click here to select the frequency of Tom. Select a nerve from the nerves list. 1090 upper limb engine nerves Alternatively, click a test protocol with the left mouse button to carry it. 675 blink continues to decrease the no longer that the patient signals that they can not hear more, or barely can hear the stamulus. Minze #2 (side) to change the side (left, right, left and right). 129 SIERA WAVE HELP Manual QuickReport - Select view of the report. 647 Basic Steps of RNS Check the amplifier configurations Check the gain, hicut, locut and scanning speed and check that they are appropriate for the selected F300 test. The incremental responses are first classified by increasing the amplitude of the negative peak, and then each incremental response is subtracted from all subsequent ones. Any identical solutions (determined by CROSS) are considered examples of alternation. Menu of the context of the muscle scoring table EMG. 1159 h Reflex reflex Verification - Click here to select the number of checks displayed on a horizontal line. To use the aid system, expand the book chapters to the left (clicking on the positive signals) and click on the typicals you want to know more. To save these changes as the new standard configurations for the EMG orientation test protocol. Continue to stimulate and store to 10 or 20 answers to be purchased. The Standard Model of "MMUA REPORT" Fan is an example. 487 SIERA WAVE HELP MANUAL EMG Manual. 989 including in reports 750 excluding a race The keys of the botan and the function of the program change to reflect the position controls of mode. Active 1 Entry: Belly of Mother Cup. Assign an abnormal signal of gravity if you have the Optional Integrated Phrases Generator, you may click on the mouse right to display a list of possible meanings. Gain - Turn this botan to change the selected NCV tracking gain. 565 VIII saving saving change It can be define as a local folder, a network folder or other record of record. 890 Adjustment Cursors this view is initially displayed if you start the QuickReport Networks outside the Sierra Wave program. 647 Knob & Fkey (RNS) controls 737 Muscle List (F3) 1006 Reviewing an Examination Examination The value of counting is the total number of traction that can be collected in the SMUA tracking buffer. 861 Gain of change of a stored lock The amplitude (innate to the peak) and the (negative peak) of each response is calculated and displayed in the RNS table window. 860 Excluding Blacks r distin - This column displays the distance values for segments on the right side against vel (m/s) - This column displays the corresponding speed values to the contralateral side. 607 Change sides This is usually defined as number 4 or 5. 363 creating a new study 151 Copy Examination of the patient Store Botan: Press to store active tracking (white). Nerve mapping data are saved in a file in the configuration folder of the user. The configurations of the NCV test protocol will be displayed on the right side of the screen. Select the SEP test protocol from the study/test menu. Configuration Directorate: The configuration folder is where the user test parals, study lists, and preservation files are stored. 964 Print a report If you are using an LCD television monitor instead of a CRT monitor, see the document "291218 -933 - Configuration Instructions for LCD Decherboard Monitor.pdf Click with the right mouse button in the toolbar to change/in Varia Sections of the toolbar controls and change the source size. 521 Sierra wave manual help manual Typically the NCV website table lists the places of stimulation from distal to proximal and stimulation is performed in the same way. Incremental Mune Testing Options of the Incremental Mune Setup are discussed in detail in the Chapter Configuration of the Aid System Test Protocol. The test protocol is inserted in the study window below the currently selected test. 909 saving changes in the configurations of the Mune-MPS If the nerve corresponding to the selected side is not listed in the study window, it is automatically added to the window. CREF is activated for channels 1 and 2 and 3. The botans are labeled with the name of the model currently attributed to them. The all-adapted mother supports the record of Smups of each stamulum location along the nerve. Click with the right mouse button on the muscle name in the study window. Change muscle scoring if a scoring table of the EMG Mother is selected, you can change the muscle scoring selections for a motto simply by clicking with the left mouse buttons of the mouse inside the table. 799 EPS (SEP, AEP, VEP, P300) the standard configuration Of 1 dB increments, which, in the 861 Sierra Wave curve manual results in a lower value of SMUP MOTHER and therefore a larger or overestimated mune value. Pulse Width - Normally defined as 100 or 200 microseconds. 915 Sierra Wave Help Manual Study Window. Change the configurations for the initial side of the test displacement and channel displacement and click OK. 1255 Dangerous Operation Conditions The lower the configuration of the lands of rejection the more sensitive the program reject large artifacts. 772 Table Options Tappicic Configurations Gain (UV/DIV) Hicut (Hz) Locut (Hz) Scanning Speed (MS/DIV) 2K engine nerves 5k 10k 10 5.0 Sensory nerves 10 to 20 2k 10 2.0 2. 970 - Muscle data Alternation of increasing answers increasing negative negative amplitude and then subtracts each incremental response of all subsequent; Any identical solutions are considered examples of alternation. A curve is any change in the direction of the signal that exceeds 50 UV between the UMA (O) and End (E) cursors. 87 SIERA WAVE HELP Manual AEP - Operation Báica Select the AEP Test: If a study has already been selected, just click on the AEP test protocol in the study window or rotate the buttan No. 1 (item / study site) to highlight the test. An optional sentence generator is available to create phrases that describe the results. 110 Introduction - Basic frequency - click here to select the frequency of Tom. Select a nerve from the nerves list. 1090 upper limb engine nerves Alternatively, click a test protocol with the left mouse button to carry it. 675 blink continues to decrease the no longer that the patient signals that they can not hear more, or barely can hear the stamulus. Minze #2 (side) to change the side (left, right, left and right). 129 SIERA WAVE HELP Manual QuickReport - Select view of the report. 647 Basic Steps of RNS Check the amplifier configurations Check the gain, hicut, locut and scanning speed and check that they are appropriate for the selected F300 test. The incremental responses are first classified by increasing the amplitude of the negative peak, and then each incremental response is subtracted from all subsequent ones. Any identical solutions (determined by CROSS) are considered examples of alternation. Menu of the context of the muscle scoring table EMG. 1159 h Reflex reflex Verification - Click here to select the number of checks displayed on a horizontal line. To use the aid system, expand the book chapters to the left (clicking on the positive signals) and click on the typicals you want to know more. To save these changes as the new standard configurations for the EMG orientation test protocol. Continue to stimulate and store to 10 or 20 answers to be purchased. The Standard Model of "MMUA REPORT" Fan is an example. 487 SIERA WAVE HELP MANUAL EMG Manual. 989 including in reports 750 excluding a race The keys of the botan and the function of the program change to reflect the position controls of mode. Active 1 Entry: Belly of Mother Cup. Assign an abnormal signal of gravity if you have the Optional Integrated Phrases Generator, you may click on the mouse right to display a list of possible meanings. Gain - Turn this botan to change the selected NCV tracking gain. 565 VIII saving saving change It can be define as a local folder, a network folder or other record of record. 890 Adjustment Cursors this view is initially displayed if you start the QuickReport Networks outside the Sierra Wave program. 647 Knob & Fkey (RNS) controls 737 Muscle List (F3) 1006 Reviewing an Examination Examination The value of counting is the total number of traction that can be collected in the SMUA tracking buffer. 861 Gain of change of a stored lock The amplitude (innate to the peak) and the (negative peak) of each response is calculated and displayed in the RNS table window. 860 Excluding Blacks r distin - This column displays the distance values for segments on the right side against vel (m/s) - This column displays the corresponding speed values to the contralateral side. 607 Change sides This is usually defined as number 4 or 5. 363 creating a new study 151 Copy Examination of the patient Store Botan: Press to store active tracking (white). Nerve mapping data are saved in a file in the configuration folder of the user. The configurations of the NCV test protocol will be displayed on the right side of the screen. Select the SEP test protocol from the study/test menu. Configuration Directorate: The configuration folder is where the user test parals, study lists, and preservation files are stored. 964 Print a report If you are using an LCD television monitor instead of a CRT monitor, see the document "291218 -933 - Configuration Instructions for LCD Decherboard Monitor.pdf Click with the right mouse button in the toolbar to change/in Varia Sections of the toolbar controls and change the source size. 521 Sierra wave manual help manual Typically the NCV website table lists the places of stimulation from distal to proximal and stimulation is performed in the same way. Incremental Mune Testing Options of the Incremental Mune Setup are discussed in detail in the Chapter Configuration of the Aid System Test Protocol.
